

## Ashish Upadhyay - Senior IT Architect/ETL

“If Japio can completely get rid of ETL/ESB, I think life would be much easier.”

**01**

**Would you recommend this iPaaS solution to somebody in your role and why will it help somebody in your role?**

This will definitely help in my role because I often deal with complex ETL projects. With Japio, I can quickly validate connections, have a quick view of data and probably save heavy efforts on complex ETL.

**02**

**How are you currently getting your data into your visualization tool for analysis?**

I mostly leverage a combination of QuickSight, Tableau, custom tools etc.

**03**

**How much time do you spend on data analytics projects?**

Approx. 20 hours per week.

**04**

**How much easier is using our iPaaS compared to hand coding?**

I would say it is much easier, faster and cheaper compared to hand coding. It is challenging to quantify as it may vary by project.

**05**

**How much time could Japio save you from the manual integration task?**

Probably upto 60%.

**06**

**How much easier is using our iPaaS compared to ETL/ESB- they tend to be very complexed and time consuming**

Correct, ETL is time consuming. If Japio can completely get rid of ETL/ESB, I think life would be much easier.

**07**

**Does the Json & CSV formats make it easier for you to complete analytics projects faster?**

Yes. JSON should be the default data structure for ANY data pull at this point.
