

Jack Lindsey - Data Science & Analytics

“Japio makes it easy to wrangle massive sets of data without having to know SQL, yet gives the option to add custom SQL queries.”

01

Would you recommend this iPaaS solution to somebody in your role and why will it help somebody in your role?

Yes, this solution would be incredibly useful for any data analyst (or even data novice for that matter), but more so shows a glimpse at the future. I believe SQL and some of the archaic syntax is on its way out. Japio makes it easy to wrangle massive sets of data without having to know SQL, yet gives the option to add custom SQL queries.

02

How are you currently getting your data into your visualization tool for analysis?

Currently I download it and upload it directly. Or pull from an S3 bucket

03

How much time do you spend on data analytics projects?

20 hours a week minimum

04

How much easier is using our iPaaS compared to hand coding?

It is 10x easier to use Japio than handwriting all of the SQL

05

How much time could Japio save you from the manual integration task?

Potentially hundreds of hours over a 6 month to a year period

06

How much easier is using our iPaaS compared to ETL/ESB- they tend to be very complexed and time consuming

I would say it is like a hybrid between tableau and snowflake which I really appreciate

07

Does the Json & CSV formats make it easier for you to complete analytics projects faster?

Yes, but the power of Japio is ease of integration with AWS and Google Cloud.
